

Make your design bigger than the final ski size it needs to be about 2 cm wider and about 5cm longer to allow for movement and shrinkage of material during printing prose and building of the ski.

The ski outline shape is only there as a guide for you to see what will actually end up on the finished ski. Due to the unique way we hand make our skis we cant guarantee that everything on the design will fit exact, small details around the edge may be missed.

Please do not embed the template shape into your design we need to remove it for printing.
